

OFF TO BANGKOK

CTAC Asia 2026

Port Technology
International

**Container Terminal
Automation Conference**
Asia

On 8–9 September, Ruchir Kakkad and Bhumin Vadalia represented WebOccult at CTAC Asia 2026 in Bangkok.

Hosted by Port Technology International, the event brought together people working across ports, terminals and container operations.

The visit started the evening before with the CTAC Asia Drinks Reception. Conversations, introductions and familiar faces from an industry we work closely with.

Over the next two days, those conversations moved into the conference rooms, covering automation, terminal operations and the challenges teams are dealing with on the ground.

For WebOccult, it was a chance to listen, meet people in the industry and understand where our work can fit into conversations beyond India.

And Bangkok opened another conversation: APEC.

What's inside:

**Bangkok To
The Apec Market**

**A New Weboccult,
Online**

**Where The Work Is
Happening**

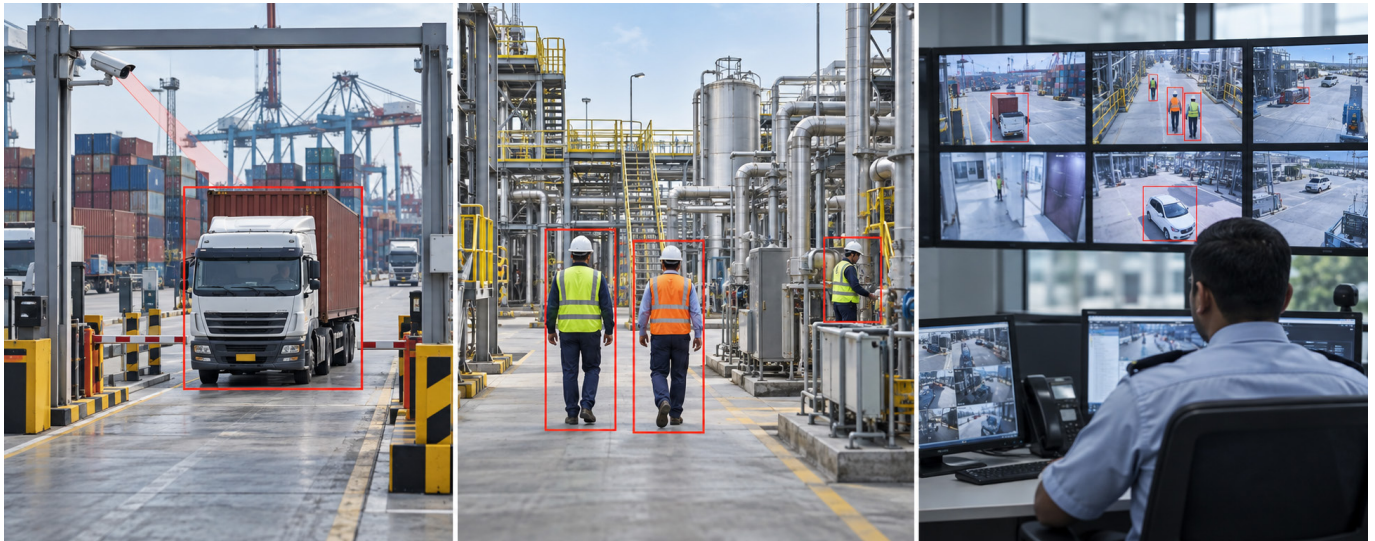

Until the Next Time

BANGKOK TO THE APEC MARKET

New conversations lead to New opportunities.

The conversations in Bangkok have opened up opportunities for WebOccult across the

For us, that means taking what we have built around AI vision, container tracking, gate automation and terminal operations into markets where similar challenges are already being discussed.

Our work is already running across ports, terminals, plants and enterprise sites globally, with 175+ active deployments and 230+ gate lanes live on Gotilo.

The next step is taking those capabilities into more conversations, more sites and more markets.

Bangkok was two days.

The opportunities it opened could go much further.

A NEW WEBOCCULT, ONLINE

We got our website revamped

WebOccult has a new website NOW.

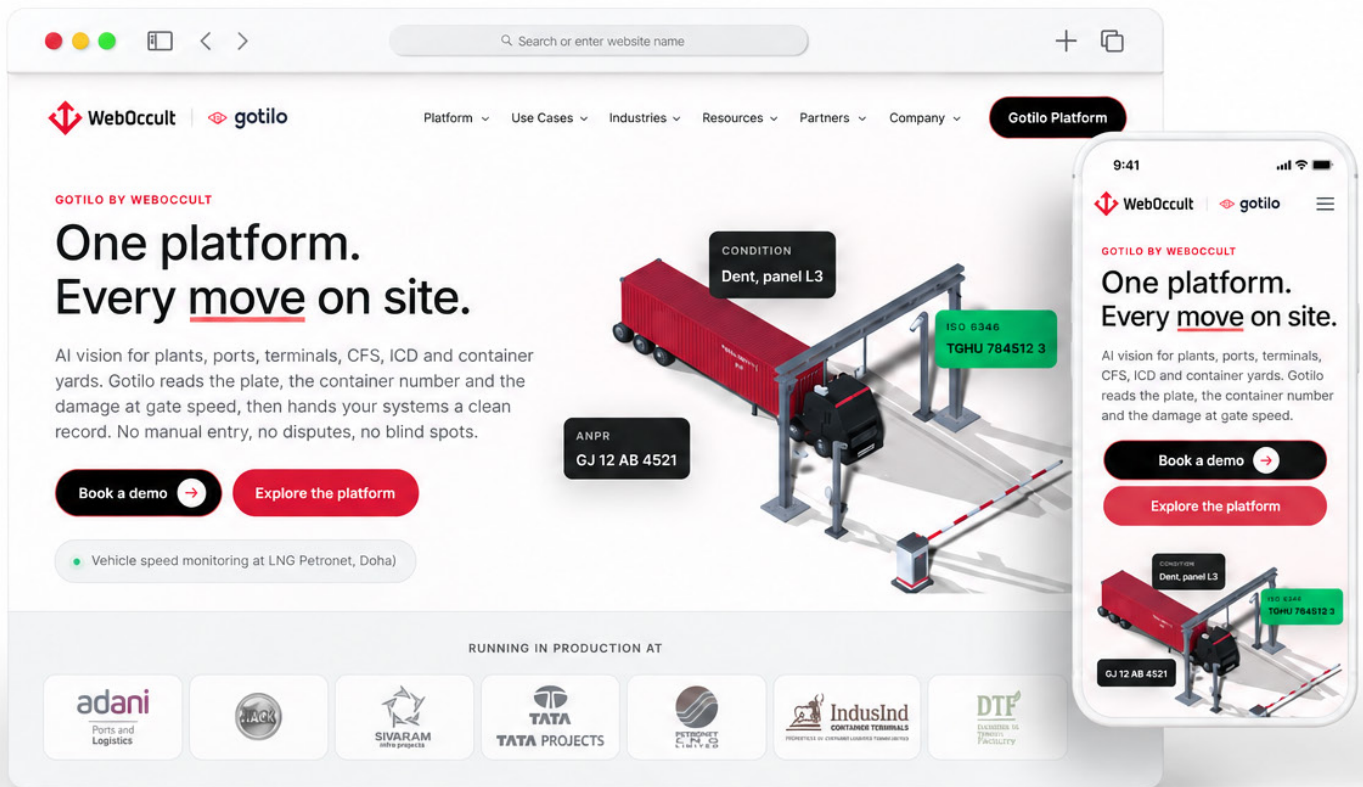

And this time, we wanted it to show what we actually do.

The revamped website brings Gotilo, our AI vision platform, use cases, deployments, industries and case studies into one place.

Visitors can now explore how we work across container OCR, gate automation, yard tracking, damage detection, safety and more.

It also puts our work in the field front and centre, with live deployment numbers, case studies and the problems we solve every day.

Take a look: weboccult.com

WHERE THE WORK IS HAPPENING

Different sites. Different challenges. One growing footprint.

From ports and logistics yards to industrial and enterprise environments, WebOccult's solutions are being used across different kinds of operations.

Ports & Terminals

- Container tracking
- Gate automation
- OCR
- Damage detection

Industrial Sites

- Movement tracking
- Safety monitoring
- Process visibility

Enterprise Operations

- AI vision
- Automation
- Site intelligence

And behind these deployments are the teams and businesses we work with every day.

Until the Next Time...

A lot can happen in two months.

A few good stories, a few good conversations and plenty to take forward.

See you in the next edition.
